

The complete crypto exchange, ready to trade.

Spot & futures trading, P2P, multi-chain wallets, copy trading, instant swaps and bank-grade security — all in one fast, real-time platform your users can trust.

WHY BITZEN

Everything a modern exchange needs.

BitZen brings spot and derivatives trading, custody across seven blockchains, peer-to-peer deals and social trading into one system — with a real matching engine behind every order and a double-entry ledger behind every balance.

10

Live spot markets

50×

Max futures leverage

7

Blockchains supported

24/7

Live matching engine

Spot Trading

Live order book, candlestick charts and limit, market & stop-limit orders on every pair.

Futures

Perpetual contracts up to 50× leverage with isolated and cross margin.

P2P Trading

Escrow-protected peer-to-peer deals with in-app chat and dispute resolution.

Multi-chain Wallet

Real on-chain deposits and withdrawals across Bitcoin, Ethereum, BNB, TRON and more.

Copy Trading

Follow top traders and mirror their spot trades automatically, with profit sharing.

Bank-grade Security

2FA, anti-phishing codes, withdrawal IP whitelist, KYC and a double-entry ledger.

A real matching engine

Every pair runs its own price-time-priority matching loop with live order-book and trade updates pushed to the screen over web sockets — not simulated fills.

Safe by design

Funds move only through a double-entry ledger with locked-balance holds; P2P and withdrawals use escrow, and every balance can be reconciled to the chain.

EVERYTHING IN ONE PLACE

The platform

Each area shares one account, one wallet and one set of balances. Users move between spot, futures, P2P and swaps without ever leaving the exchange.

Spot Trading

Order book, charts, limit / market / stop-limit orders and full order & trade history.

Futures

Perpetuals up to 50x, isolated & cross margin, take-profit / stop-loss and funding.

P2P Marketplace

Buy and sell with other users, escrow-held crypto, live chat and admin disputes.

Copy Trading

Browse leaders by performance, allocate funds and mirror their trades automatically.

Demo Trading

Practice spot and futures with a virtual balance on real live market prices.

Instant Swap

Convert between any two held assets in seconds at the live market price.

Multi-chain Wallet

Per-user deposit addresses, auto-crediting and on-chain withdrawals across networks.

Market Insights

24-hour stats, interactive charts, sparklines and per-coin detail pages.

Launchpad

Surface new token sales and projects to your trading community.

Token Listings

Let projects apply to list, with documents and an admin review workflow.

Security Center

2FA, anti-phishing code, withdrawal whitelist, device & login activity and a security score.

Support Tickets

In-app help desk with attachments, so users reach your team without leaving the app.

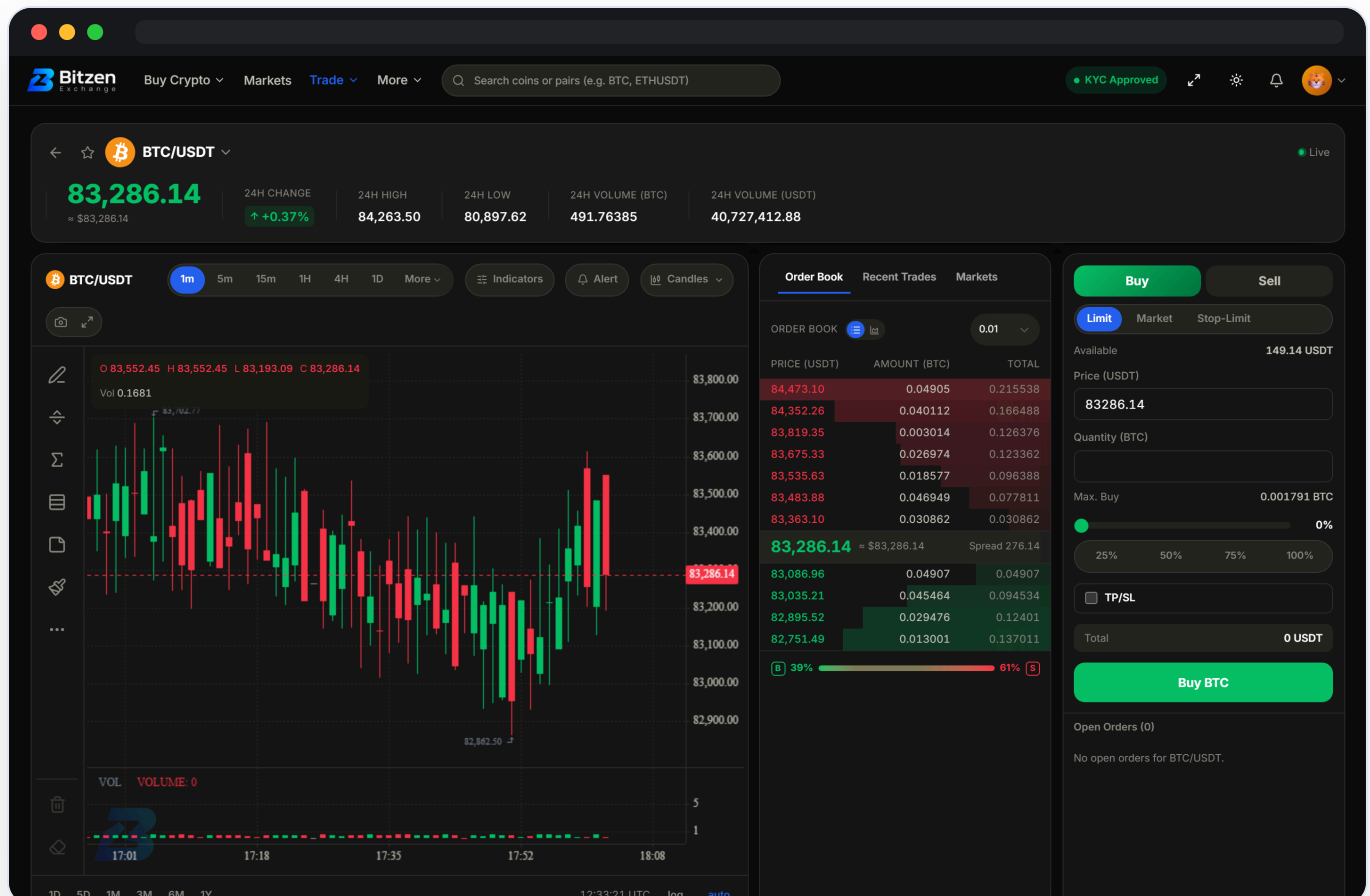

Admin Console — a separate control panel for your team: approve KYC, add coins and trading pairs, set maker/taker fees, review withdrawals and disputes, manage futures risk limits, monitor system health and pull real reports.

SPOT TRADING

A professional trading terminal.

A full trading screen on every pair: a live candlestick chart with indicators and drawing tools, a depth-ranked order book, the recent-trade tape and an order ticket — updating in real time as the market moves.

The spot trading screen — live chart, order book with buy/sell depth and the order ticket.

- ◆ **Live order book & trade tape** streamed over web sockets, no page refresh.
- ◆ **Buy/sell depth bars** and a live spread so users read the market at a glance.
- ◆ **Maker / taker fees** set per pair from the admin console.
- ◆ **Candlestick charts** with multiple timeframes, indicators and drawing tools.
- ◆ **Open orders, order history & your trades** all in one place.
- ◆ **One-tap amount** with balance-aware max and percentage sizing.

ORDER TYPES & THE ENGINE

Every order, matched for real.

Three real order types, a true price-time-priority matching engine and automatic settlement — the same mechanics the major exchanges run on.

Limit

Set the exact price you want. The order rests in the book until the market reaches it, with any price improvement passed back to you.

Market

Execute immediately against the best available liquidity, with a slippage-aware hold so the fill is always covered.

Stop-Limit

Arm an order that stays dormant until a trigger price is hit, then places your limit order automatically.

Price-time priority

Each pair runs its own matching loop: orders are filled best-price-first, and ties are broken by who was there first. Funds are locked when an order is placed and released the moment it fills or cancels.

Instant, reconciled settlement

On every fill the engine moves value between both parties through the double-entry ledger and pushes the new order book and trade to every connected screen within moments.

Place order

Funds locked on the spot.

Into the engine

Published to the pair's loop.

Matched

Best price, time priority.

Settled

Both wallets credited.

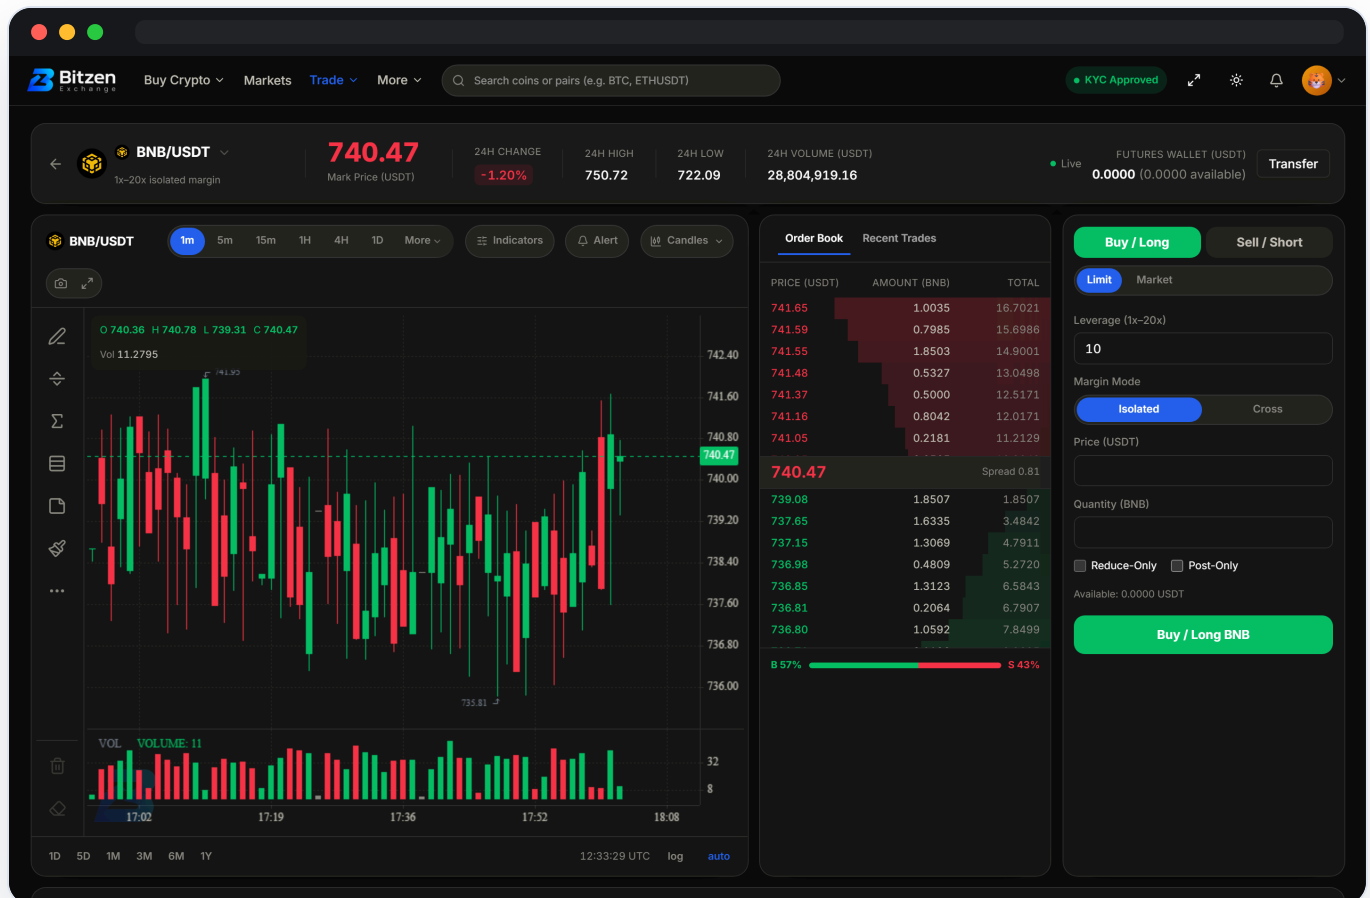

Live update

Book & tape refreshed.

FUTURES TRADING

Go long or short, with real leverage.

Trade perpetual contracts with up to 50× leverage, choose isolated or cross margin, and protect positions with take-profit and stop-loss. Liquidation and funding run automatically off a real mark price.

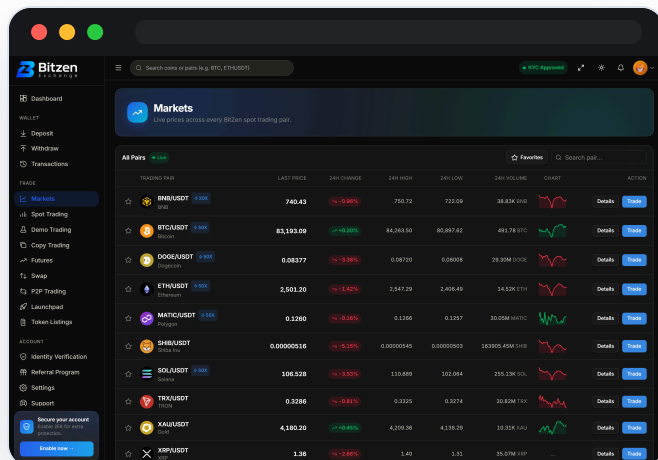

Futures terminal — leverage selector, margin mode, order book and a live derivatives chart.

- ◆ Perpetual contracts up to 50× on major assets.
- ◆ Isolated & cross margin selectable per position.
- ◆ Take-profit & stop-loss checked against the live mark price.
- ◆ Mark-price liquidation with an insurance fund backstop.
- ◆ Funding payments settled automatically between longs and shorts.
- ◆ Reduce-only & post-only flags and admin-set risk limits.

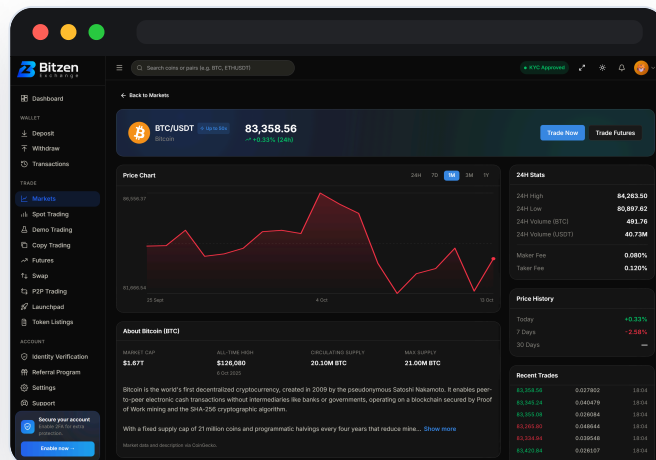

MARKETS & INSIGHTS

Every market, with the data behind it.

A live markets board with 24-hour stats and sparklines, plus a detail page for each coin — price history, key stats, maker/taker fees and a project overview.

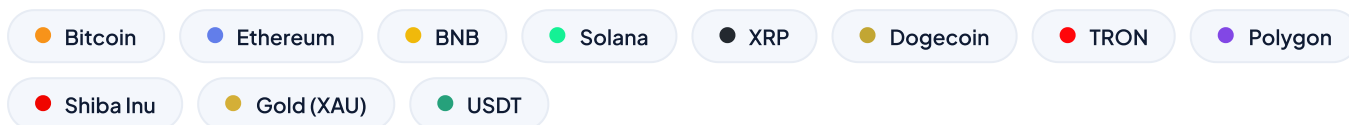

Markets board — live price, 24h change, high / low, volume and a sparkline per pair.

Coin detail — price chart, 24h stats, price history and a project overview.

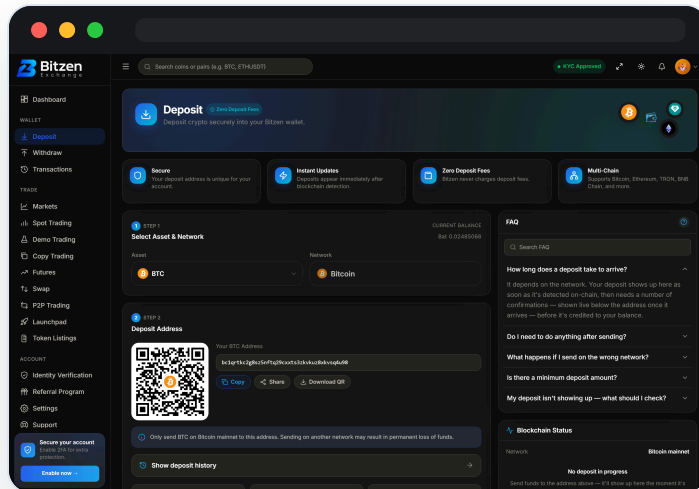

Assets available to trade

MULTI-CHAIN WALLET

Real on-chain custody across networks.

Every user gets a unique deposit address on each supported chain. Deposits are detected on-chain and credited automatically; withdrawals are signed and broadcast to the real network.

Deposit — pick asset & network, scan the QR and watch confirmations live.

- ◆ **Unique per-user address** on every supported chain.
- ◆ **Auto-credit** after the required on-chain confirmations.
- ◆ **QR code & one-tap copy** for every deposit.
- ◆ **Real withdrawals** signed and broadcast on-chain.
- ◆ **Full deposit & withdrawal history** with transaction links.

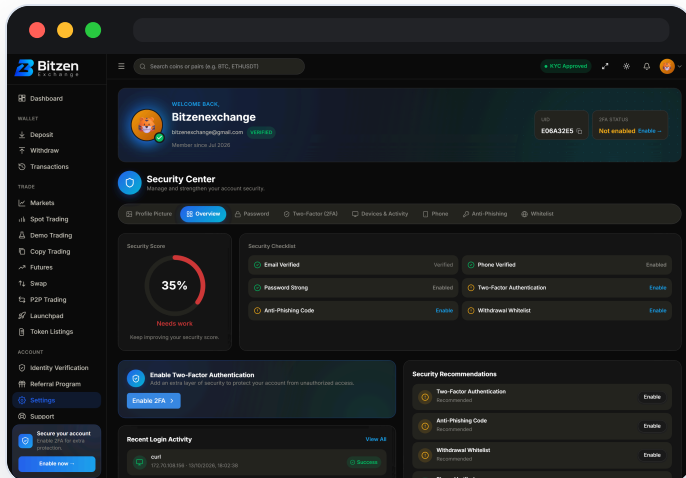

Supported networks

 Bitcoin BTC	 Ethereum ETH · ERC-20	 BNB Smart Chain BNB · BEP-20	 TRON TRX · TRC-20
 Polygon POL · USDT	 Solana SOL · USDT	 Dogecoin DOGE	 USDT on 5 networks

SECURITY & COMPLIANCE

Protection at every layer.

A dedicated Security Center gives each user control over their account, while the platform enforces identity, escrow and a double-entry ledger behind the scenes.

Security Center — score, checklist, two-factor, anti-phishing and login activity.

Two-factor & anti-phishing

Authenticator-app 2FA plus a personal anti-phishing code on every sign-in.

Withdrawal whitelist

IP whitelist, login history and rate limiting guard account access.

Identity verification

KYC must be approved before withdrawals unlock.

Double-entry ledger

Every balance is backed by matched debit and credit entries with locked-balance holds, so funds are always accounted for and reconcilable to the chain.

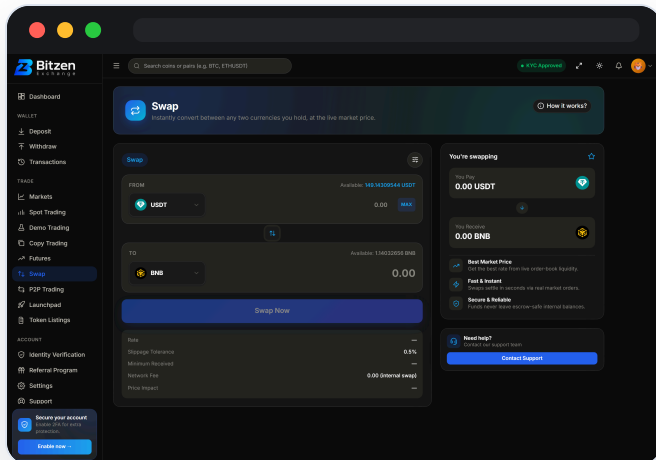

Escrow on risky steps

P2P trades and withdrawals move through escrow and review, so crypto is never released until the right conditions are met.

MORE WAYS TO TRADE

P2P, instant swap & copy trading.

Beyond the order book, BitZen gives users simpler and social ways to move and grow crypto — each built on the same real balances and security.

Instant Swap — convert any two held assets at the live market price.

P2P Marketplace

Post or take ads to buy and sell crypto directly with other users. The crypto is escrow-held, chat is built in, and admins can resolve disputes — with zero platform fee.

Copy Trading

Browse lead traders ranked by performance, allocate funds and automatically mirror their spot trades — with profit sharing handled for you.

- ◆ **Swap** settles in seconds at the live rate with no order-book effort.
- ◆ **Copy trading** lets beginners follow experienced traders safely.
- ◆ **P2P** keeps funds in escrow until both sides confirm.
- ◆ **Everything** runs on the same wallet, ledger and security model.

PRACTICE & ON THE GO

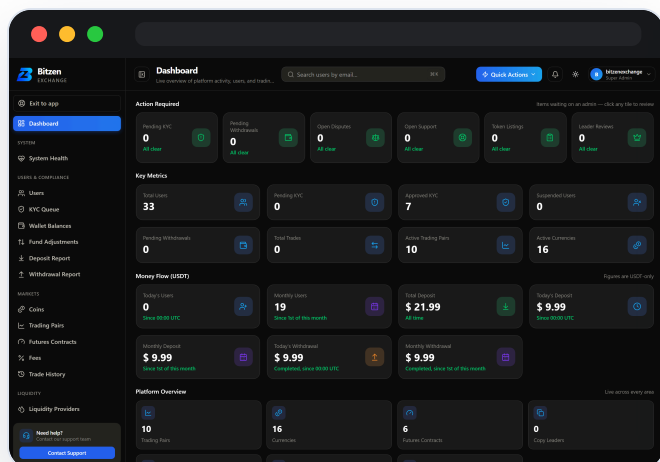

New users practise with a virtual balance on real prices, and the whole exchange is fully responsive — the same account and features on any device.

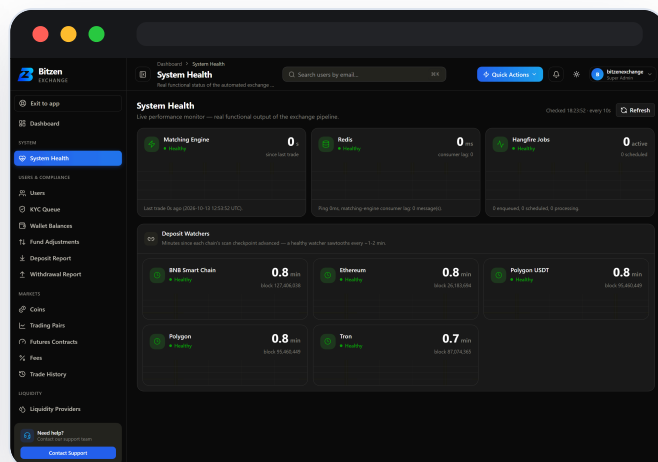

FOR YOUR TEAM

A complete admin console.

Run the whole exchange from one control panel: approve users, manage coins, pairs and fees, review withdrawals and disputes, and watch the live health of the trading engine and chain watchers.

Admin dashboard — action queue, key metrics and money-flow at a glance.

System Health — matching engine, Redis, jobs and per-chain deposit watchers.

- ◆ **Users & KYC** — review applications, manage accounts and roles.
- ◆ **Fees & futures risk** — maker/taker rates and leverage/margin limits.
- ◆ **Reports** — real deposit, withdrawal and trade reports with export.
- ◆ **Coins & trading pairs** — add assets, set precision, tick sizes & limits.
- ◆ **Withdrawals & disputes** — review payouts and resolve P2P cases.
- ◆ **System health** — live monitoring of the engine and chain watchers.

HOW IT WORKS

From sign-up to withdrawal.

The whole journey a trader takes on BitZen — every step is real and verified end-to-end, with security applied at every stage.

1

Register & verify

Sign up with email, secure the account, then complete identity verification (KYC) to unlock withdrawals.

[Email + password](#)
[2FA](#)
[KYC approved](#)

2

Deposit funds

Pick an asset and network, send to your unique address, and watch it credit automatically once confirmed on-chain.

[7 blockchains](#)
[QR + address](#)
[Auto-credit](#)

3

Trade your way

Spot with limit / market / stop-limit orders, futures up to 50×, peer-to-peer deals, instant swaps or copy a top trader.

[Spot](#)
[Futures](#)
[P2P](#)
[Swap](#)
[Copy](#)

4

Settle & track

Orders match on a real engine and settle to both wallets instantly. Every move is recorded for the user and your admin team.

[Real-time settlement](#)
[Full history](#)

5

Withdraw

Request a withdrawal; it is reviewed (automatically or by an admin) and broadcast on-chain to the destination address.

[Admin review](#)
[On-chain payout](#)

Security wraps every step

Double-entry ledger with locked-balance holds, escrow on P2P and withdrawals, 2FA and anti-phishing codes, withdrawal IP whitelist, rate limiting and login history — so funds and accounts stay protected end to end.

GET STARTED

See BitZen Exchange live.

We walk you through the platform, set it up with your brand, and support you through launch — so you can go live quickly and confidently.

1

Live demo

A guided walkthrough of spot, futures, P2P and the admin console on real data.

2

Setup & branding

Your logo, colours, coins, pairs and fees configured for your exchange.

3

Launch & support

Deployment, security hardening and hands-on support after go-live.
