Q4 launch plan — final review

Daniel Okafor <daniel@northpeak.co> to Priya Sharma · cc Aisha Khan

Hi Priya,

Attached is the **final deck** for Thursday's launch review. I folded in t legal and the updated rollout timeline.

Highlights

- Phased rollout: EU on Nov 4, North America on Nov 11
- Launch pricing locked at three tiers — Starter, Team and Busi
- Support playbook and FAQ ready for the help desk

Milestone	Owner	Date
Final QA sign-off	Lena	Oct 28
Press embargo lifts	Maria	Nov 4

Let me know if anything needs to change before I send it to the lea

Thanks,
Daniel

WHY MAILFLOW

Give your users the inbox they expect — without moving their mail.

Most hosting panels still ship webmail that looks and feels a decade old. MailFlow replaces it with a modern, responsive experience on top of the mail server you already run. No migration, no new mailboxes, no lock-in.

0

emails stored in our database — mail stays on your server

3

built-in themes: Light, Dark and Glass

18

interface languages, incl. 9 Indian languages

1-click

Windows installer with IIS reverse proxy

Connects to anything

Any RFC-compliant IMAP / POP3 / SMTP server. Auto-discovery finds the right hosts, ports and encryption from just an email address.

Private by design

Mailbox content is streamed live from your server and never copied. Credentials are encrypted with AES-256-GCM.

Your brand, every domain

Each client domain gets its own name, logo, colours and support address — perfect for hosts and resellers.

COMPATIBLE WITH

If it speaks standard mail protocols, MailFlow works with it.

cPanel

Plesk

DirectAdmin

CyberPanel

HestiaCP

hMailServer

Exchange (IMAP)

Dovecot

Postfix

Courier

For hosting providers

- **Replace dated webmail** with a premium experience customers notice.
- **White-label per domain** so every client sees their own brand.
- **Runs beside your panel** on the same server, talking to mail over localhost.

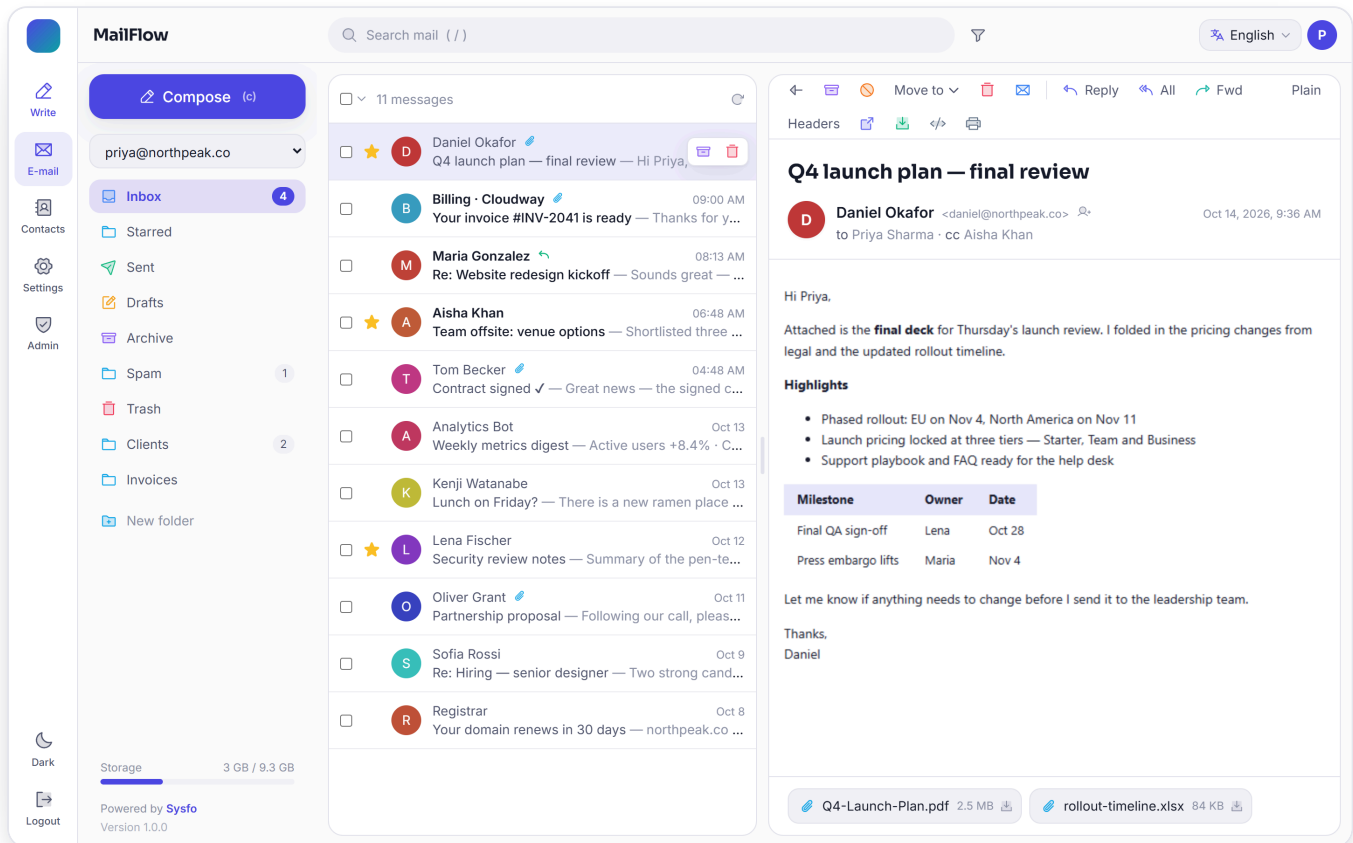

For businesses

- **Keep full data ownership** — no third-party cloud mailbox.
- **Familiar, fast UI** that needs zero training.
- **Admin console** to manage users, roles and access.

Everything your users do all day, made effortless.

A clean three-pane layout with folders, a fast message list and a reading pane.

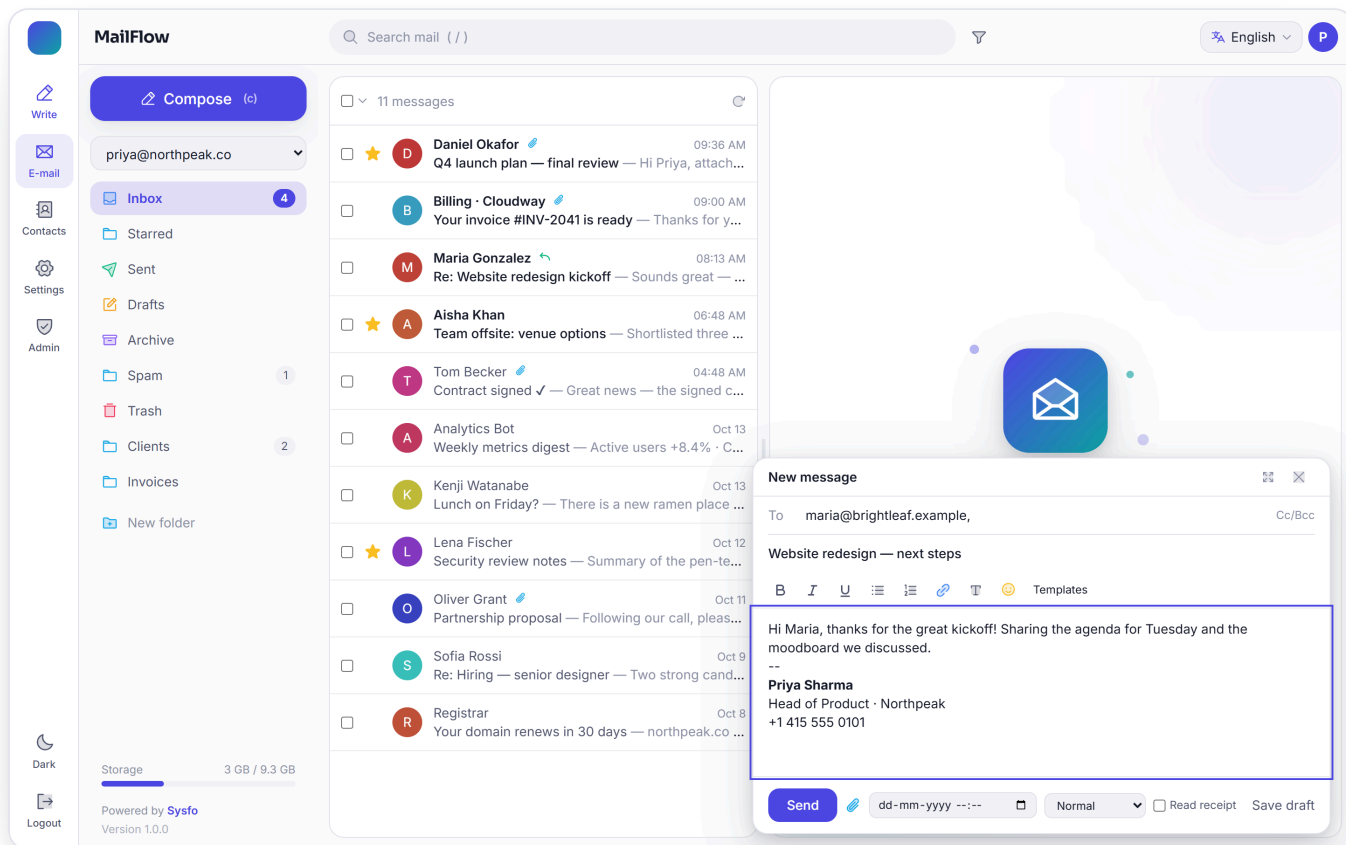

Keyboard shortcuts, drag-and-drop and instant search keep power users moving.

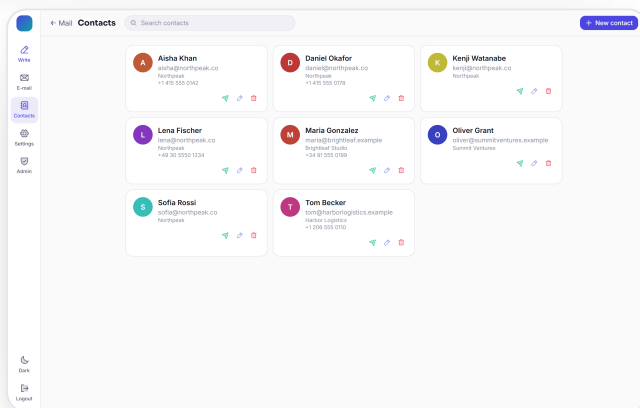

- **Real-time push** — new mail appears instantly via IMAP IDLE, with desktop notifications.
- **Server-side & advanced search** by sender, subject, date and more.
- **Folders your way** — create, rename, delete, and drag messages between them.
- **Bulk actions** — read/unread, star, archive, spam, move and delete.
- **Safe HTML viewing** — sanitised, sandboxed rendering with remote trackers blocked.
- **Attachment preview** & download, print, view headers or source, save as .eml.
- **Pop-out windows** to read several messages side by side.
- **Storage meter** showing live mailbox quota usage.

A composer that works the way people write.

A docked, Gmail-style composer with rich text, signatures and templates — plus a built-in address book that autocompletes as you type.

- Rich text formatting, links, lists and emoji.
- Signatures & templates inserted automatically or in one click.
- Drag-and-drop attachments and recipient autocomplete.
- Schedule send, priority flags and read receipts.
- Reply, reply-all and forward with the original quoted cleanly.

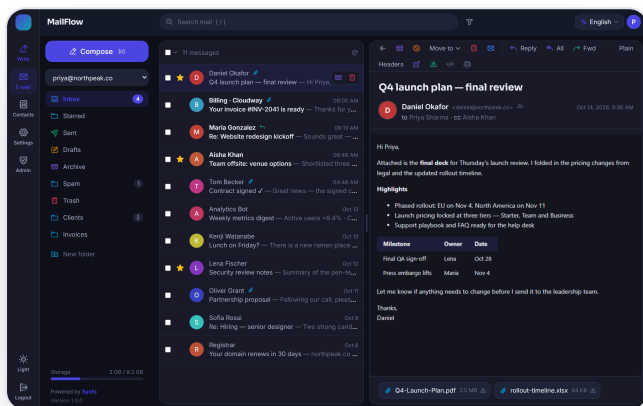

Contacts — searchable address book with one-click compose

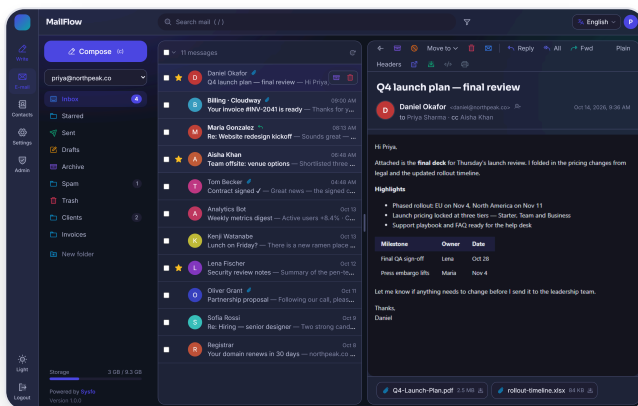

LOOK & FEEL

Beautiful in any light, on any screen.

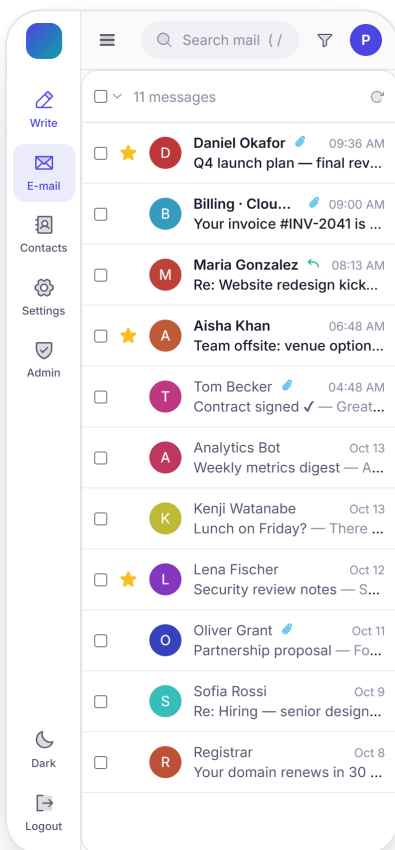

Users switch between Light, Dark and Glass themes instantly. The layout adapts from wide desktop monitors down to phones, so the same webmail works everywhere.

Dark theme

Glass theme

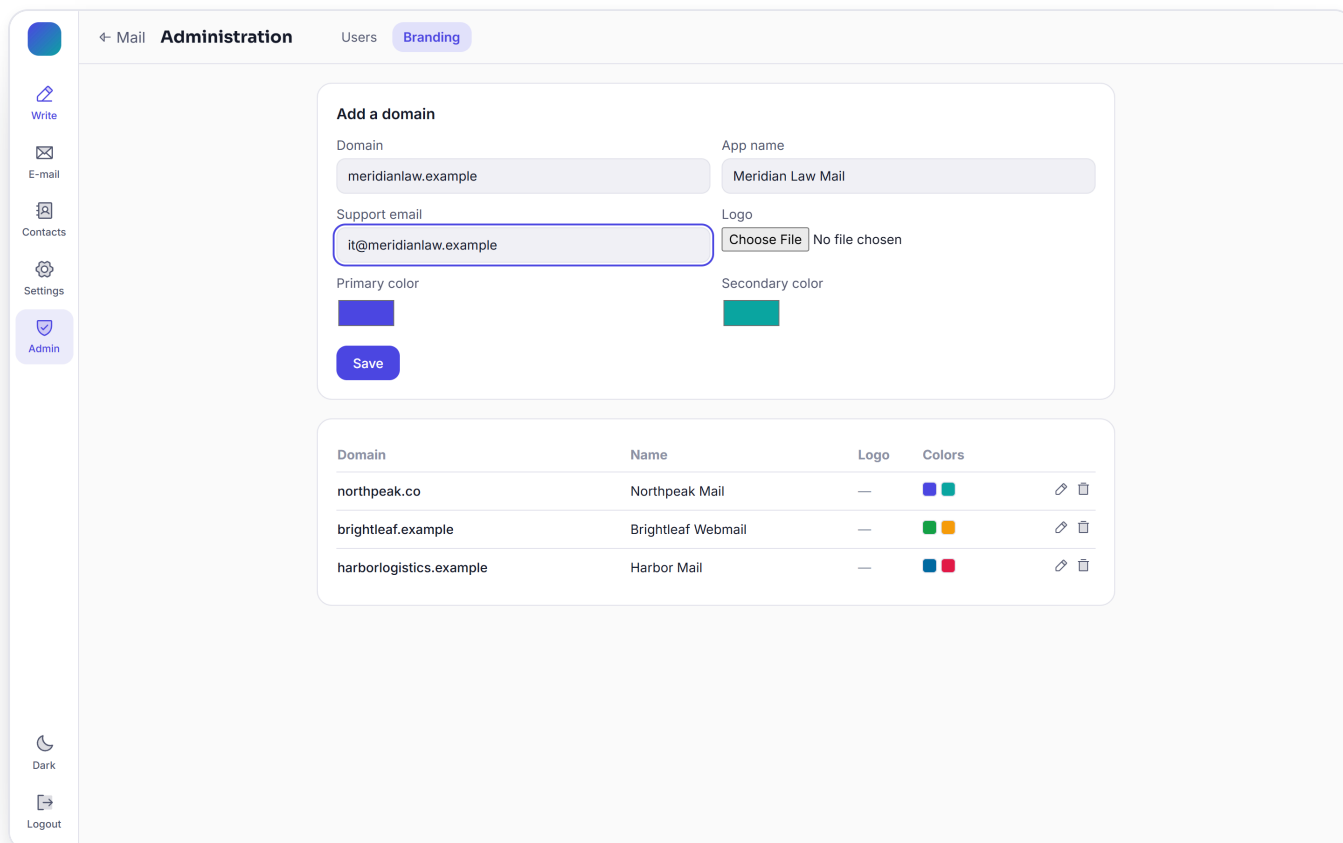

Responsive on mobile

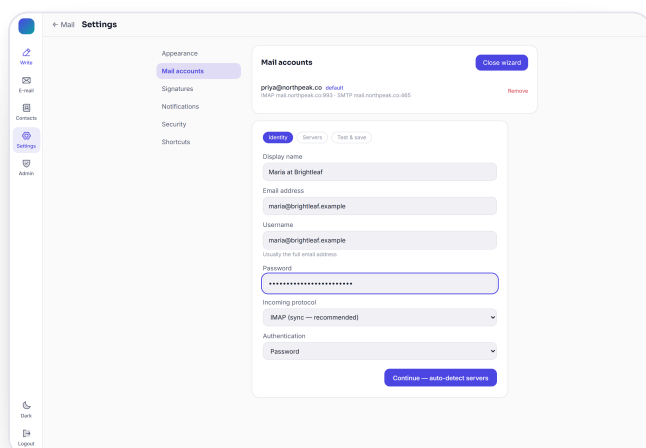

- **Three built-in themes** with per-user preference saved to their profile.
- **Responsive layout** — collapsible sidebar and touch-friendly lists on phones and tablets.
- **18 interface languages** including Hindi, Bengali, Tamil, Telugu, Marathi, Gujarati, Punjabi, Kannada and Malayalam, plus Spanish, French, German, Arabic, Chinese, Portuguese, Russian and Japanese.
- **Comfortable or compact density** and optional message snippets.
- **Keyboard shortcuts** for power users — press **?** for the full list.

One installation. Every client's brand.

Admins add a domain, upload a logo and pick colours. Visitors on that domain instantly see their own branded webmail — name, logo, accent colours and support email.

Per-domain branding profiles

Guided account setup with auto-discovery

- **3-step account wizard** — identity, servers (auto-detected), then a live connection test before saving.
- **Multiple mailboxes per user**, with a quick account switcher.
- **User management** — promote admins, disable accounts instantly.
- **Session control** — users can see and sign out of any active device.
- **Panel-ready** — designed to sit behind a hosting panel as its default webmail.

Enterprise-grade security. Installs in minutes.

Encrypted credentials

Mail passwords encrypted with AES-256-GCM; app passwords hashed with BCrypt.

Hardened sessions

Short-lived tokens held in memory, rotating httpOnly refresh cookies with reuse detection.

Tracker & XSS protection

Sanitised, sandboxed HTML; remote tracking pixels blocked; rate limiting and security headers.

Simple Windows deployment

- **Double-click installer** sets everything up for you.
- **Runs as a Windows Service** — starts automatically, no console needed.
- **IIS reverse proxy configured** automatically (URL Rewrite + ARR).
- **Prerequisites handled** — IIS, SQL Server Express and more.
- Docker deployment also available.

Technical specifications

Protocols	IMAP, POP3, SMTP · SSL/TLS, STARTTLS
Real-time	IMAP IDLE → Server-Sent Events
Backend	ASP.NET 8, MailKit, EF Core
Frontend	React 18, TypeScript, Tailwind
Database	Microsoft SQL Server (settings only)
Hosting	Windows Server + IIS, or Docker
Browsers	All modern desktop & mobile browsers

See MailFlow on your own mail server.

Book a live demo or request a trial build branded with your domain. We'll help you get it running alongside your existing mail setup.
